

# Summary Report

We want to start by saying “Thank you!” to the QJam2021 team for all the effort invested in organizing such an amazing event. And thanks to Xavier Coiteux-Roy for the inspiration to explore these ideas in the form of a project.

We were able to come up with a first implementation that allows us to visualize the big possibilities of a tool like this. It can definitely thrive collaboration and cooperation that will ultimately transform the scientific work, specially for students. We are focusing right now on the Quantum Community as we are part of it, but its use is not restricted to it, its use can be spread among the whole scientific community.

We have two main deliverables, on one side is the application that has a back-end and a front-end but is meant as one single product. On the other side, we have a storyboard that we showcase in our video, it contains the main ideas we think can be implemented in future iterations of this project, either by the same team or by other teams maybe in future QJams.

We are so happy to have been part of QJam2021. This has been an amazing experience for the whole team, full of learning and collaboration.

Thank you!
